

## Spring Medical Systems New Practice Management Solution Is Now Shipping

SpringCharts PM to Aid Medical Practices in Managing Clinical and Financial Operations

November 26, 2012 - Houston, Texas — Spring Medical Systems, a leading provider of EHR solutions for independent medical practices, today announced the general availability of SpringCharts PM, a comprehensive practice management software system. SpringCharts PM will be seamlessly integrated with SpringCharts EHR and together the two will provide medical practices with a complete and flexible technology platform to manage both their clinical and financial operations.

### About SpringCharts PM

SpringCharts PM is the perfect complement to the proven SpringCharts EHR now in use by practices of various specialties around the country. When tightly integrated with SpringCharts EHR, these two components together enable medical practices to automate their entire workflow.

SpringCharts PM includes the following main features:

- Full-featured Scheduler that can manage multi-providers and rooms at the same time
- Online eligibility verification
- Authorization management
- Automatic tracking of insurance billing through the submission and payment stages
- Assignment of multiple insurance plans per each patient
- Customized report generator

Intuitive and easy-to-use

SpringCharts PM allows healthcare professionals to easily manage the entire practice workflow including patient registration, scheduling, electronic documentation, billing and reports. In addition, Spring Medical Systems will assist in migrating practice data from a practice's existing Practice Management System.

“SpringCharts PM is a significant addition to the SpringCharts solution suite,” said Mark Benvegna, president and CEO of Spring Medical Systems. “Now Spring Medical practices can manage all aspects of their office with one easy-to-use and full featured product set.”
